Great game. A little confusing, but i love it! 10/10. My degree is in Geology and I work with rocks at a mine as my job. Surprised to see a game like this, so I kept it on my Wishlist for a long while before giving it a shot.

The game plays more like a Museum Tycoon. You manage a museum and send Geologists to explore sites across the globe. Their finds fill your museum, attract visitors, gain investments, and let you expand and search more exotic locations.

The geology is solid, but very basic. Not that that's a bad thing on its own, perhaps I hoped for more advanced details.

Each of the "ingredients" you collect aren't very flavorful or interesting, just ClipArt-level pictures. I didn't see these "ingredients" as anything more than tools strictly to advance the game, like keycards in DOOM.

While I like this game's idea in principle, its execution leaves a lot to be desired. Perhaps if the rocks and minerals and fossils collected were a system with more depth, this would hold my attention.

(also needs Arizona DLC, why the heck we gonna skip over the Grand Canyon and all the copper out here?). This game is really fun just to play for an hour or two, especially if you like prehistory and the creatures that come with it. I hope there will be more updates to improve the game.. As a geology student, I've enjoyed the couple of hours I've put into the game so far. There was a bit of a learning curve, but between the in-game tips and the short guides available from the developer, I've managed to catch on. I would have liked to see more in the way of facts about the different types of rocks and fossils, such as their depositional environment, composition, etc., but all in all it's a fun game with just enough material to help with reviewing what you already know or are in the process of learning. I'm hoping there are future expansions/updates in the works, but I feel my money was well spent at this point.
